

Faster, Better Informed Product Registration Updates.

A large share of time spent by regulatory teams is anchored in product change management. Due to the varying regulatory requirements across country and region, the task of determining the impacts on existing product registrations is typically a time-consuming, highly manual process.

RegulatoryOne Local Impact Assessment streamlines internal registration review for regulatory teams, enabling user-friendly automation that saves countless hours of manual searching through active registrations. The built-in automation assists users in identifying underlying implications for registrations and dossiers updates quickly. When assessing whether a registration can be reused or an amendment is needed, regional or local differences are automatically identified, allowing users to proceed without delay. The Local Impact Assessment feature of RegulatoryOne allows companies to more effectively manage inherent product evolution and respond to customer needs.

Automatically find matching registrations when registering new products

Velocity to Market

Reduce time to market by quickly identifying impacted registrations of a proposed product change. Align activity on global, regional, and local levels with automatic setup of tailored regulatory processes and country specific requirements.

Faster Innovation Cycles

Ensure marketing needs are met on time, every time by reusing existing registrations and already approved content. Only work on what is necessary.

End-to-End Registration Management

Initiate registration events that define the necessary product and market requirements to create or to amend. Automation helps you identify and define the requirements for each product registration, increasing overall efficiency and visibility.

Local Impact Assessment Features

Access to Your Existing List of Registrations

No more searching through potentially hundreds, or even thousands, of existing active registrations. With impacted registrations readily available, regulatory teams can quickly assess and resolve product change requests in a consistent and reliable manner.

Split Registration Items per Region and Product

Reduce data entry by breaking down a complex registration into granular registerable items such as kit components, product shades, or respective countries and states.

Local Impact Assessment

Easily determine if the new product can be registered under an existing active registration, with amendments or no action required, or if a completely new registration is needed for that product in a specific country.

Configurable Registration Impact Factors

Define for each type of registration the factors to assess to find out if the registration can be used, as well as their impact. Registration impact factors such as – Formula, Artwork, Claims, Repack, etc. – can be easily added through configuration to meet evolving market requirements.

About Veeva

Founded in 2007, Veeva NYSE (VEEV), is a global provider of industry-specific cloud software solutions that address the unique operating challenges and regulatory requirements of the consumer products and chemical industries. Our solutions help R&D, quality, regulatory and commercial teams eliminate inefficiencies and bring high-quality, safe, sustainable products to market without compromising compliance. Veeva is headquartered in the San Francisco Bay Area, with offices throughout North America, Europe, Asia, and Latin America. [Learn more.](#)

Real-time Dashboards and Reports Submission Interface

Monitor and track KPIs including number of registrations amendments, new registration per country, pending requirements to be fulfilled, and expected documents.

Atomic Security for Total Access Control

Atomic Security allows your Vault Administrators to easily control access, visibility, and permissions to make sure that only the right people do the right things at the right time, without compromising data integrity or history.

Comprehensive Security

Veeva protects customer data with world-class physical, network, application, and data-level security. All communications to Vault and stored content are encrypted. By maintaining an ISO 27001 certified comprehensive security system, we ensure the confidentiality, integrity, and availability of our customers' data.
